Project Title	Credit Card Approval Prediction
Maximum Marks	4 Marks

Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code is showcased through a screenshot. The model validation and evaluation report includes classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

Initial Model Training Code:

Logistic Regression Model

```
def logistic_reg(xtrain, xtest, ytrain, ytest):  
    lr = LogisticRegression(solver='liblinear')  
    lr.fit(xtrain, ytrain)  
    ypred = lr.predict(xtest)  
    print("LogisticRegression")  
    print('Confusion matrix')  
    print(confusion_matrix(ytest, ypred))  
    print('Classification report')  
    print(classification_report(ytest, ypred))  
    return lr
```

Random Forest Classifier

```
[28] def random_forest(xtrain, xtest, ytrain, ytest):  
    rf = RandomForestClassifier()  
    rf.fit(xtrain, ytrain)  
    ypred = rf.predict(xtest)  
    print("RandomForestClassifier")  
    print('Confusion matrix')  
    print(confusion_matrix(ytest, ypred))  
    print('Classification report')  
    print(classification_report(ytest, ypred))
```

XG Boost Model

```
▷ [29] def g_boosting(xtrain, xtest, ytrain, ytest):  
    gb = GradientBoostingClassifier()  
    gb.fit(xtrain, ytrain)  
    ypred = gb.predict(xtest)  
    print("GradientBoostingClassifier")  
    print('Confusion matrix')  
    print(confusion_matrix(ytest, ypred))  
    print('Classification report')  
    print(classification_report(ytest, ypred))
```

Decision Tree Model

```
def d_tree(xtrain, xtest, ytrain, ytest):
    dt = DecisionTreeClassifier()
    dt.fit(xtrain, ytrain)
    ypred = dt.predict(xtest)
    print("DecisionTreeClassifier")
    print('Confusion matrix')
    print(confusion_matrix(ytest, ypred))
    print('Classification report')
    print(classification_report(ytest, ypred))
```

32]

Model Validation and Evaluation Report:
