

Project Demo Planning

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

Date	15 March 2026
Team ID	SWTID-2026-2912
Project Name	Credit Card Approval Prediction Using Machine Learning
Maximum Marks	1 Mark

S.N o	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Explain how manual credit card application review is slow and error-prone, and introduce the ML-based automated approval solution	2	Nitla Bhavani
2	Solution Architecture Overview	Walk through the Presentation, Application, and Data layers: Flask web app, ML core logic, and IBM Watson ML integration	2	Nitla Bhavani
3	Data Preprocessing & Feature Engineering	Show the dataset, cleaning steps, and how multi-class payment status codes are converted into binary risk labels	3	Peetha pujitha
4	Model Training & Comparison	Present accuracy/performance results for Logistic Regression, Random Forest, XGBoost, and Decision Tree, and explain why the best model was chosen	3	Perusomula Naga Manoj
5	Live Flask Web App Demo	Enter a sample applicant's financial and demographic details into the web app and show the instant approval/rejection prediction	4	Nizampatnam Balaji sai
6	IBM Watson ML Deployment & Q&A;	Demonstrate the cloud-hosted real-time prediction via IBM Watson Machine Learning and open the floor for questions	3	All Members

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Highlight the inefficiency of manual credit card application screening and set up why an ML-based approach is needed
2	Solution Overview	Summarize the architecture: Flask front end, four candidate ML models, and IBM Watson ML cloud deployment for scalable predictions
3	Live Feature Demonstration	Enter applicant details in the web app and show the real-time approve/reject prediction, including a high-risk applicant example
4	Q&A; Session	Address questions on model choice, feature engineering decisions (binary risk labels), and the cloud deployment approach
